

ABSTRACT

**INTERNET FORWARDING METHOD, RELATED SYSTEM AND RELATED
DEVICES**

5 A Internet forwarding method, related system and related devices to be used for forwarding internet packets from a host connected to an internet towards a destination host connected to a private internet network and vice versa, where an internet network and a private internet network are coupled through at least one edge router, and where the destination host is assigned a global

10 Internet address, and wherein the forwarding of the internet packets from one of at least one edge router towards the destination host and vice versa, is based only on the global internet address.
